The mother of invention

What kind of energy uses a sun generator.

Picture removed due to copyright

The SUN

The sun generator

Sun from a standard PV

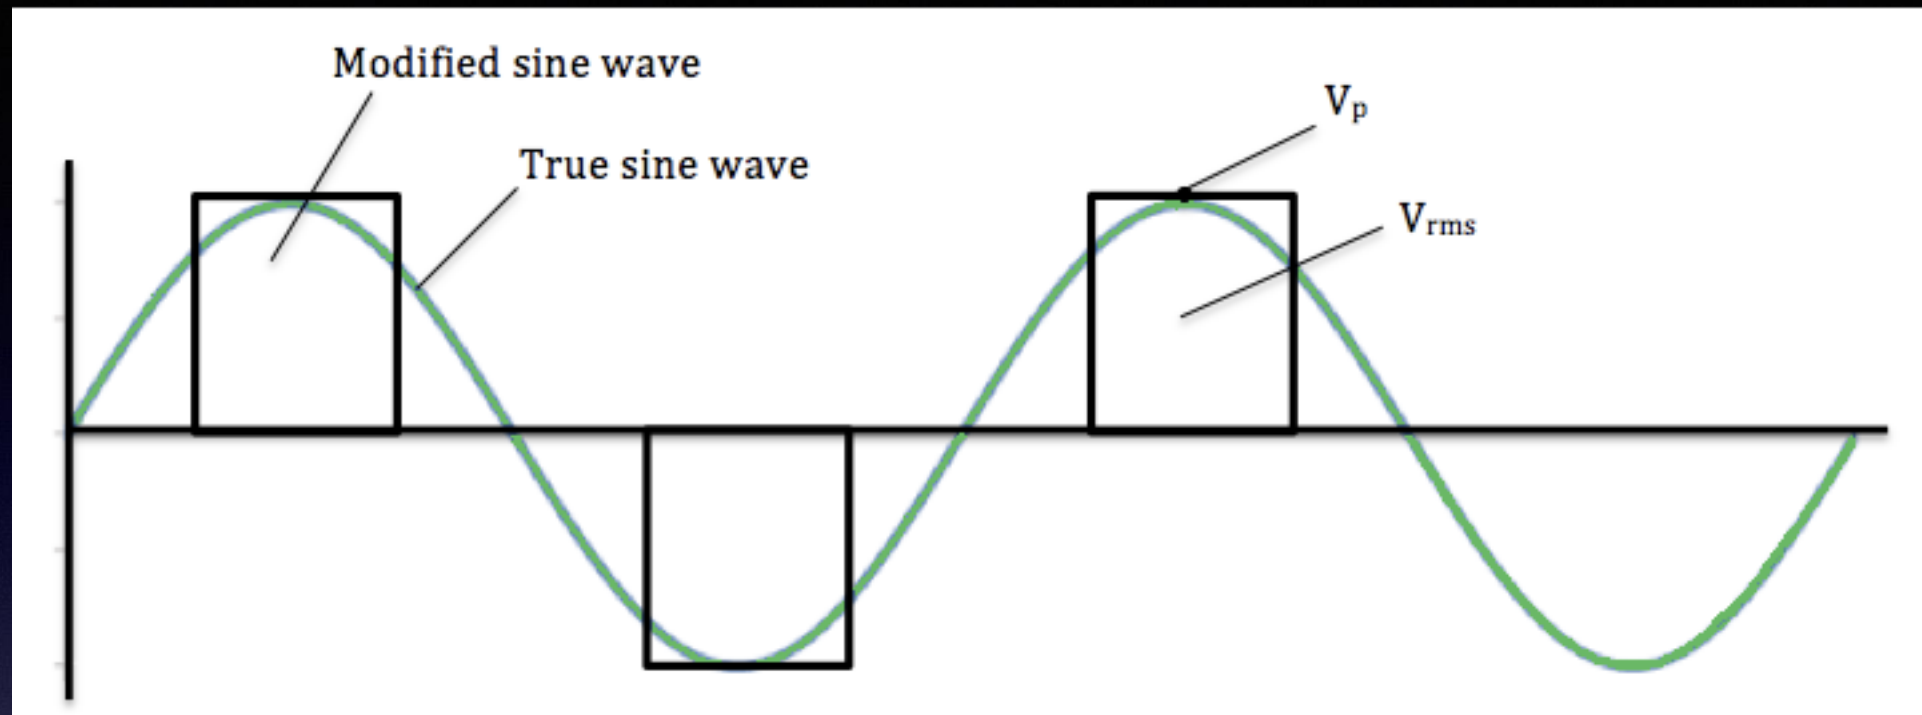

Makes 230V AC directly

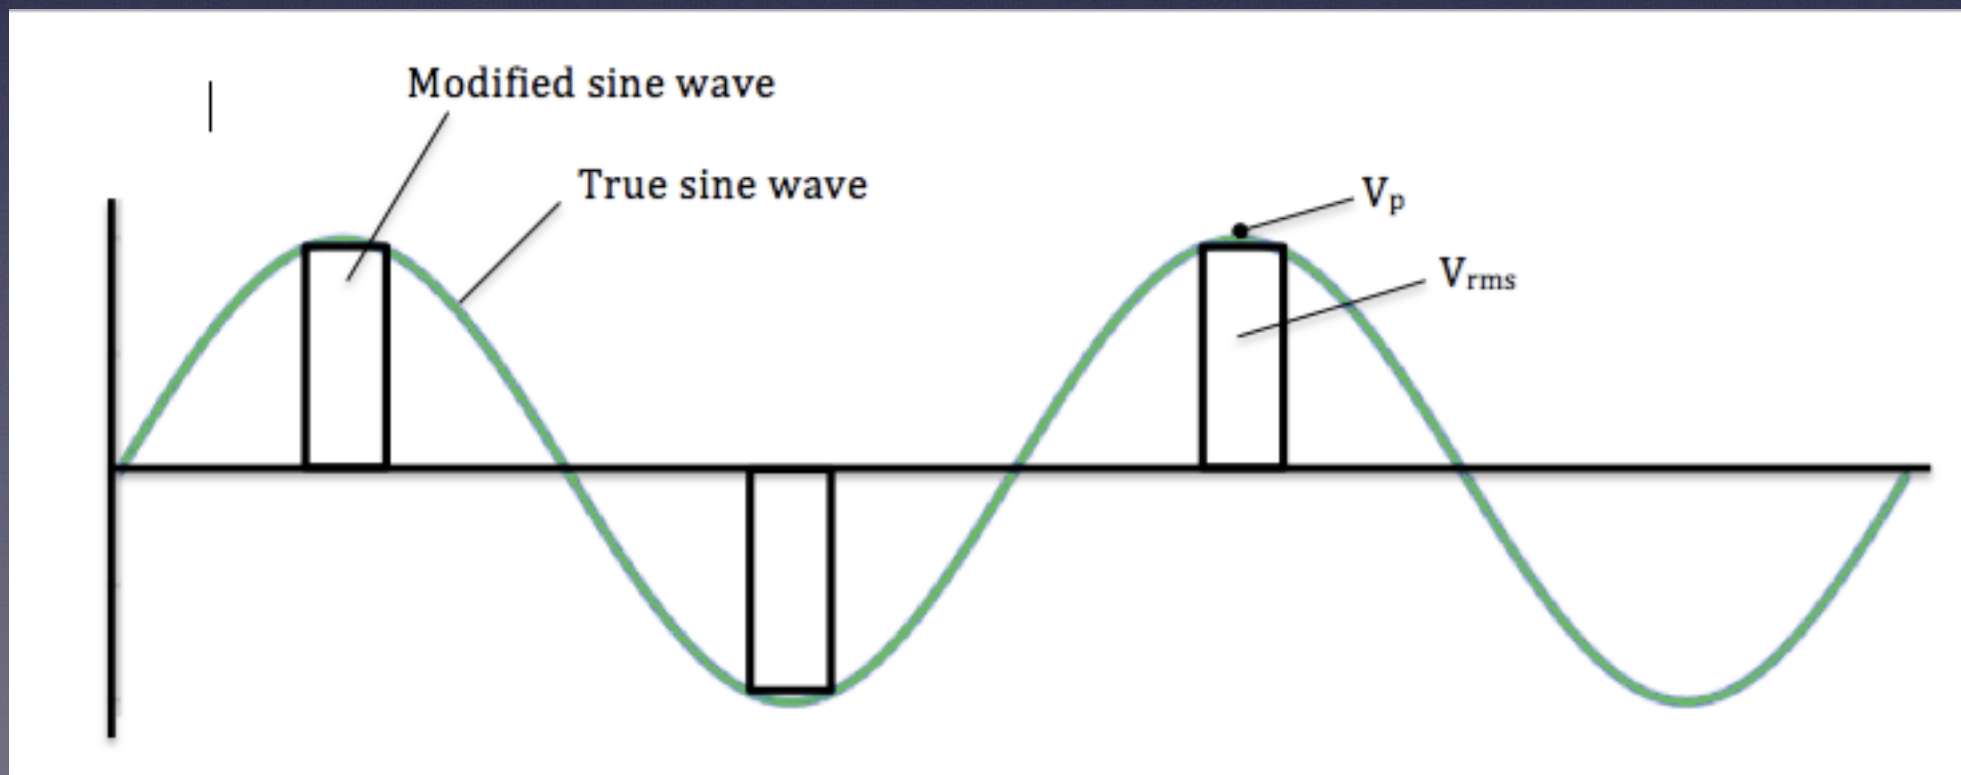

The sun generator are not

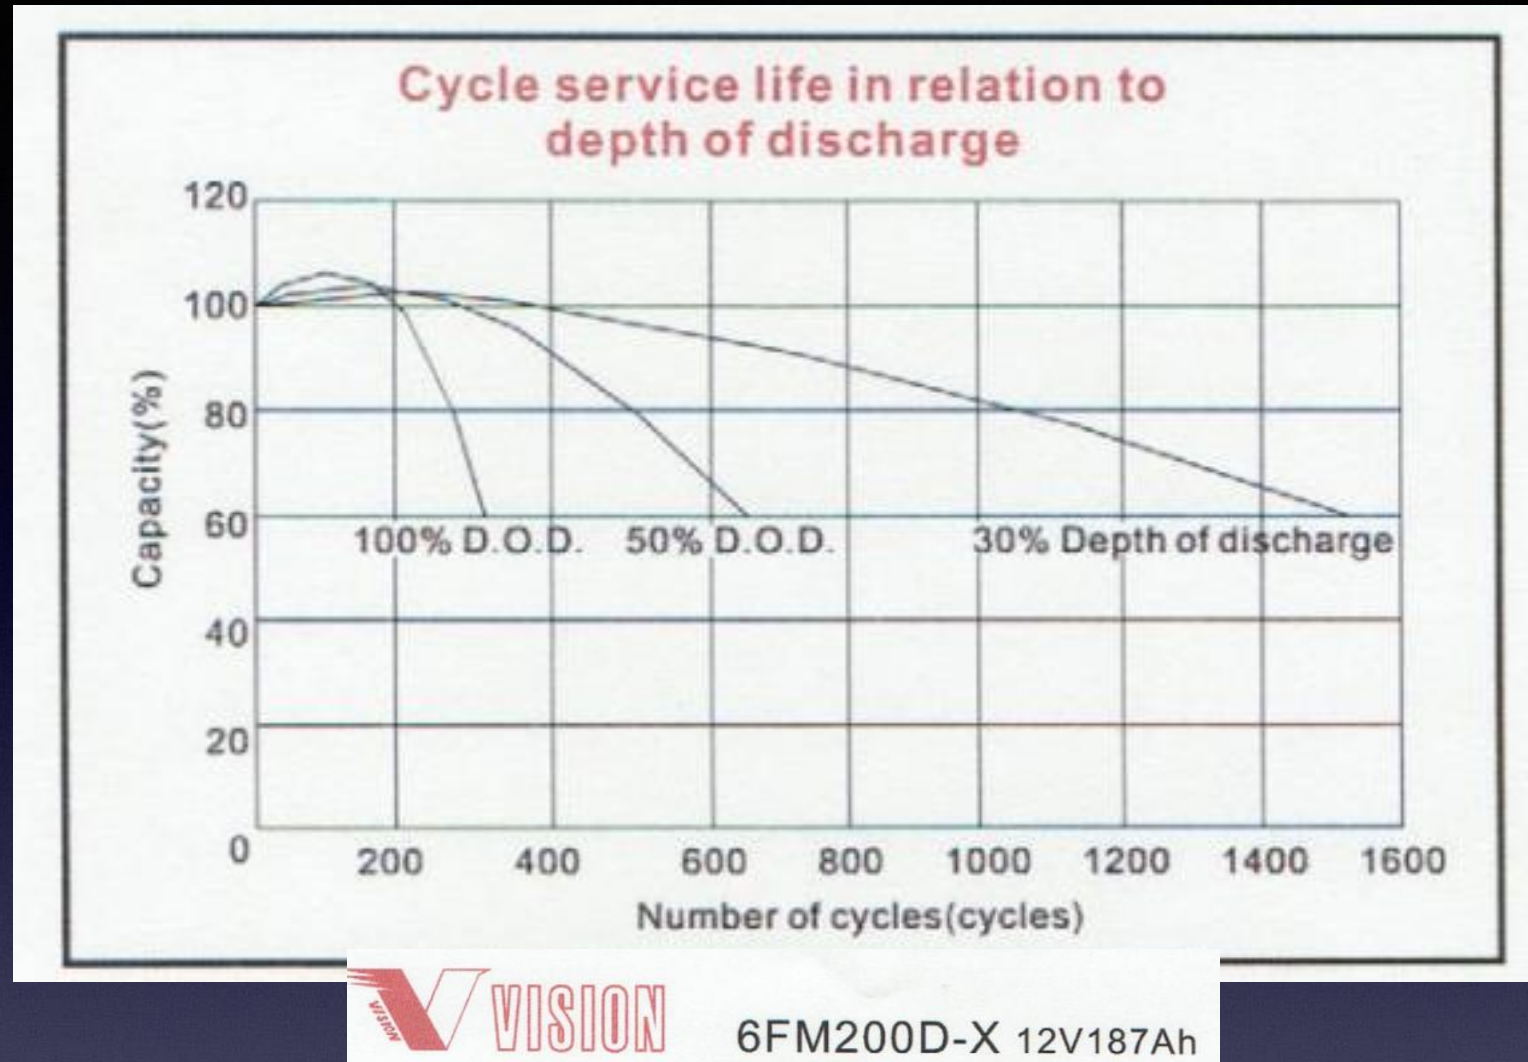

How a sun works generator

If less energy than demand

Why avoid batteries

- Do not talk about price on the battery, but about the price of storing the energy at the battery.
- Remember the temperature you got, higher temperature, less life time at the battery.
- Then you can calculate the kWh/€

What does it cost to store energy in batteries

- 12V/100Ah 186€
- After 500 time with 50% discharge we have 80%
- $12V * 50A = 600wH * 500 \text{ time} = 300Kwh$
- $186€ / 300Kwh = 0.62 € = 4,65 \text{ Kr/kwh}$
- If we are in Africa or other hot areas, 33C instate of 25C the price is $0.62 € * 2 = 1,24 €$

The price of electricity directly from solar panel

- 250W 133€
- After 20 years its 80%
- $0.250\text{kW} * 800\text{kWh} = 200\text{kwh} * 20 \text{ year} = 4000\text{Kwh}$
- $253\text{€} / 4000\text{Kwh} = 0.033 \text{ €} = 0,25 \text{ Kr}$
- If we are in Africa or other hot areas, you got more sun hours

Solar panels instead of batteries

- It's cost 0.62€/kwh in battery
- It's cost 0.033€/kwh in solarpanels
- You only need to use 6,6% of the energy from panels
- Even a gray and rain day the panels can delevary 6,6% of energy.

Where are we using the Sun geneartor

- Cooking !
- Use for small jobs.
sewing, grinding, etc.

Cook more at the Sun geneartor

Cook more at the Sun geneartor

- Even bake

Where are we using the Sun geneartor

- With more panels, we can get more power.
- Running a deep freezer
- Running bigger tolls
- More cooking

Work at day

Picture removed due to copyright

Read in the evening and sleep at night

Picture removed due to copyright

Our grandparents were planning day by wind and sun

And they do not have the weather forecast

Today we got

- Weather forecast, I hope....
- We have smart calendar
- If we combine that.....

Picture removed due to
copyright

The days whithout sun and wind

Picture removed due to
copyright

- I can find several good ideas
- But I have some job to do

Picture removed due to
copyright

Picture removed due to
copyright

Picture removed due to
copyright

copyright

And final

or not

If I can't find more to do

Picture removed due to
copyright

I am quite sure my wife got a long list who not
include electricity

Picture removed
due to copyright

More todo with out electricity

Picture removed due to
copyright

Picture removed due to
copyright

Picture removed due to
copyright

Can I now relaxe

Picture removed due to
copyright

Picture removed due to
copyright

But before you finish

- The sun or wind is back, so forget.....

Picture removed due to
copyright

Now, you will ask me, what about heating and light..

A passivhuse...

Picture removed due to
copyright

And only use light you need

Picture removed due to
copyright

And very little energy

Picture removed due to
copyright

Picture removed due to
copyright

Picture removed due to
copyright

We already got the battery

Hope You enjoyed the show
